EC DECLARATION OF CONFORMITY

in accordance with the EU Machinery Directive 2006/42/EC
applicable as from December 29th 2009:

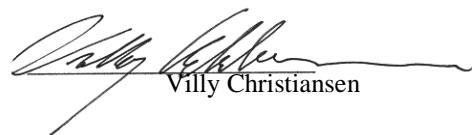

HE-VA ApS
N. A. Christensensvej 34,
DK-7900 Nykøbing Mors

hereby confirms that the following machine has been manufactured in accordance with the Council Directive 2006/42/EC.

The declaration comprises the following machine:

Grass – Roller 2,9 m

Nykøbing, December 29th 2009

Villy Christiansen

The undersigned is furthermore authorised to compile technical documentation for the above machine.

Delivery check

Check the roller for any damage. Check the hydraulic hoses for cuts and squeezing damage. Check also that the other hydraulic components have not been damaged during transport.

Check that the frame construction has not been damaged. You should also check that the roller blocks have not been exposed to impacts, which may have damaged the roller tube or the double-sealed ball bearings.

Finally check that the transport wheel nuts are tightened and OK. Check the air pressure in the tyres: approx. 3.8 bar/55 psi.

Machine description

Grass-Roller is a roller for consolidation of grassland. With water in the smooth steel rollers a high weight is achieved and with that effective consolidation which guarantees an evenly pressed grassland. This helps achieve the highest yield from the grass and good quality clean silage without soil, stones, spores etc. With a hydr. long finger harrow in 2 rows mounted in front of the Grass-Roller the grass can be ripped out and dead thatch can be removed or divided into fine particles. The Grass-Roller can be equipped with Spring-Board levelling bar or molehill bar mounted on the long finger harrow for levelling of molehills, cow pats etc., which helps avoid ingress of soil and foreign matter into fodder when harvested. Add a HE-VA Multi-Seeder onto the Grass-Roller and grass or other seeds can be drilled at the same time as the consolidation. This allows complete reseeding, and overseeding or patching in existing pastures.

Technical specifications

Working width	Roller type / Ring type	No. of spokes	Weight without equipm. and without water	Weight without equipm. with water	Power requirement HP	Transport width	Total length
Lift mounted:							
2,90m	710mm Plain roller		1.035	1.995	80-120	3,00 m	3,55 m
2,90m	620mm/24" Camb.	5S	1.510	-	80-120	3,00 m	3,55 m
2,90m	550/600 mm Star ring		1.440	-	80-120	3,00 m	3,55 m
Trailed:

Electrical system:							
Battery voltage:			V	12			
Plug for lights:				7 – poles			
Hydraulic system:							
Ma. working pressure:			Bar	220			
Pump effect:			L/min	Min 15			
Oil type:			Hydro Texaco HD32				

Safety instructions

General information

Do not start-up the machine if there are persons in exposed positions* within a hazardous area**.

When persons are in exposed positions (e.g. in connection with adjustment, maintenance, attachment and uncoupling), the following conditions must be observed:

The machine must be lowered to firm ground.

The hydraulics must be relieved.

The tractor must be stopped and the key removed from the ignition switch.

The driver must ensure that no persons are staying in exposed positions during the operation.

* Persons in exposed positions: Any person who is staying wholly or partly within a hazardous area.

** Hazardous area: On and under the machine within a distance of 4 m from the machine.

Most accidents that happen in connection with the operation, transport and maintenance of machines are caused by non-compliance with the most elementary safety conditions.

Therefore it is vital that anybody working at the machine carefully complies with the safety instructions as well as other instructions applying to the machine.

The machine may only be operated, maintained and repaired by persons, who are familiar with this work and who are further familiar with the possible elements of danger with this particular machine.

Transport on public roads

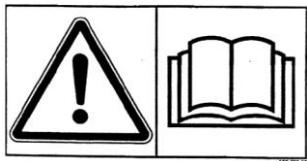

Check before transport on public roads that the attachment of the machine at the tractor is in accordance with the local rules and regulations in force (permitted total weight, permitted axle load, transport width, lights, warning signs, etc.).

Front axle load

After the attachment of the machine and at maximum load, the driving properties of the tractor must be checked. Check that the front axle is sufficiently loaded. As a minimum, the front axle load must be 20% of the tractor weight. Permitted axle load and permitted total weight for the tractor must always be observed.

NB! The driving, controlling and braking properties are affected by the attached machine combination.

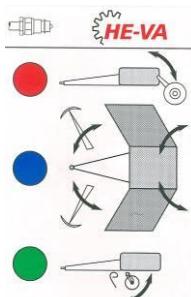

Safety - and other markings on the machine

Study the Operating Instructions thoroughly before any operation of the machine and observe all safety instructions.

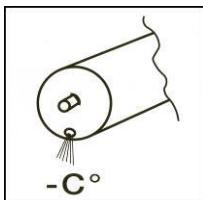

Plate with serial number and year of manufacture.

Indication label for the machine's hydraulic systems.

Red: Wheel frame
Green: Extra equipment

Empty the water out of the rollers before the temperature gets below 0 C°.

If this is not observed, our guarantee obligations will no longer apply.

Tighten up the bolts regularly.

If this is not observed, our guarantee obligations will no longer apply.

Maximum torque in Nm. w/lubricated thread			
Metric thread	Quality 8.8	Quality 10.9	Quality 12.9
M10x1,5	47	65	79
M12x1,75	81	114	136
M14x2,0	128	181	217
M16x2,0	197	277	333
M18x2,5	275	386	463
M20x2,5	385	541	649
M22x2,5	518	728	874
M24x3,0	665	935	1120
Wheel bolt M18x1,5 fine-threaded	433 Nm		
Wheel bolt M22x1,5 fine-threaded	803 Nm		

Operating instructions

Attachment

On delivery the roller is in transport position. At start-up the roller is attached to the tractor.

Important: Check that the towing hook height is between 500 and 550 mm.

Raise the support leg and place it in the transport fittings on top of the drawbar. Now fit all the hydraulic hoses.

The trailedd model requires 1 double-acting oil outlet.

The hoses for the wheel frame are provided with **red** cable straps.

The hoses for the long finger harrow are provided with **green** cable straps. (extra equipment)

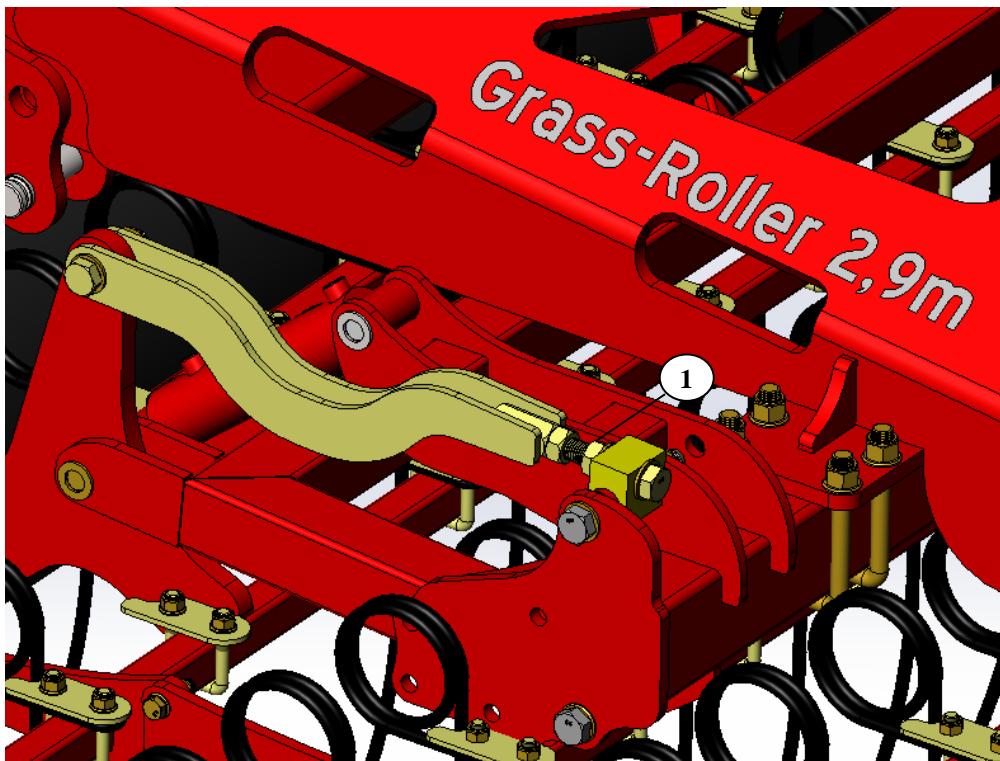

Settings and adjustment

Long finger harrow

The long finger harrow is raised and lowered with the hydraulic system, marked with **green** colour.

During work the long finger harrow can be raised and lowered as required. However, take care that the harrow does not work too deeply, meaning that it will carry the whole weight of the roller.

The front harrow is to operate in horizontal position when the machine is in working position. This is adjusted on the parallel rods, by loosening the nuts ① on each parallel rod and by tightening on the opposite side.

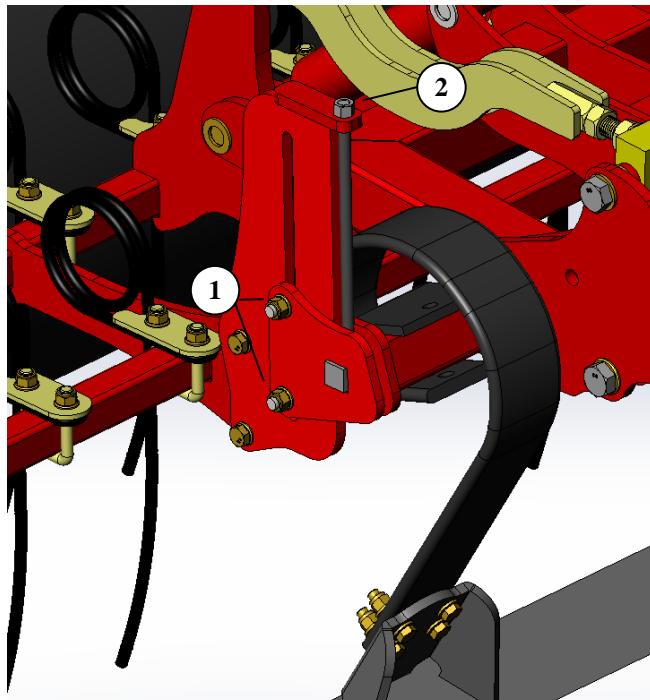

Each tine can be worn approx. 200 mm. However, they will be less flexible and may need earlier replacement.

Levelling board

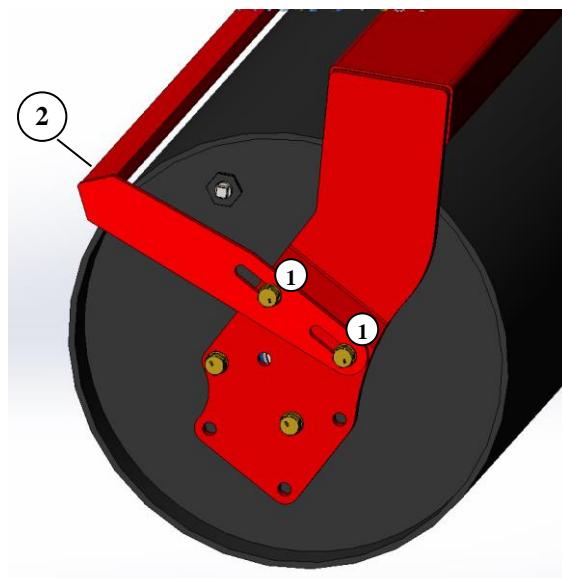

The levelling board is raised in proportion to the wear and tear of the tines. This is performed by loosening 2 nuts ①, the using a 19 mm spanner on the thread spindle, which determines the height ②. When the desired height is reached, the 2 nuts are tightened again ①.

Be sure that all adjusters are set the same, otherwise the levelling board will operate unevenly. This is easily done by measuring the length of the spindle.

Roller scraper

The scrapers are bolted on the end plates. In order to adjust the scraper bar loosen the 2 bolts at the top ① and push the scraper bar against the roller ②. Please be aware that the scraper bar is to be placed 5 – 10 mm from the roller.

Maintenance

Lubrication

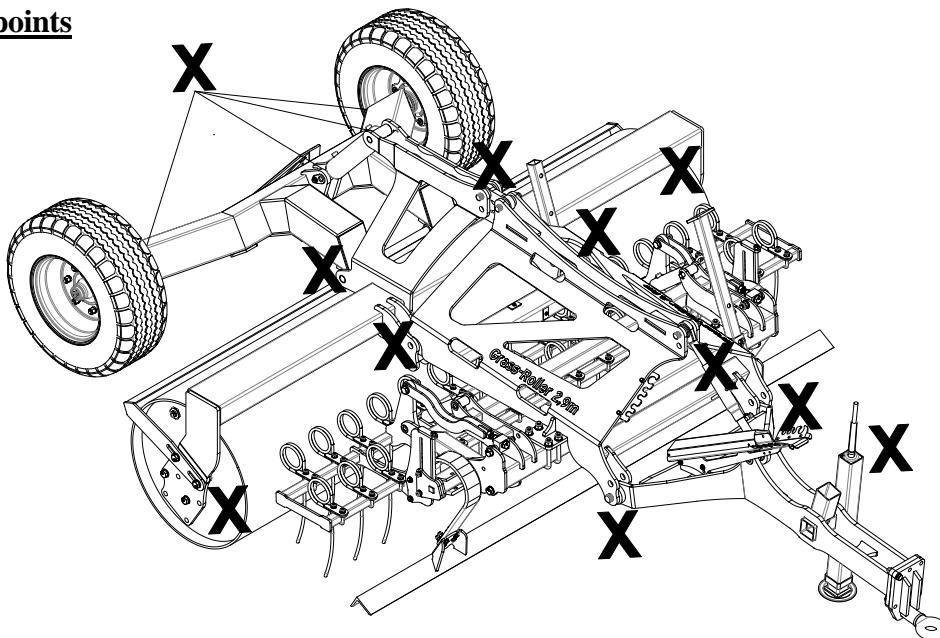

Important:

After every approx. 10 working hours the wheels, ball bearings and stop rings are tightened. Hoses, fittings and cylinders are inspected for eventual leaks and are tightened too.

After every approx. 10 working hours all movable parts. After every 30 working hours the tip cylinder's pins and the 3 pins in the drawbar are to be lubricated.

The bearings of the roller are to be lubricated after every 100 working hours and/or after cleaning.

Lubrication points

**Important:** Oil, type Hydro Texaco HD32 has been filled in the hydraulic system.

After the season, the roller is to be cleaned and lubricated with grease and oil.

Empty the water from the rollers to avoid frost damage.

Important:

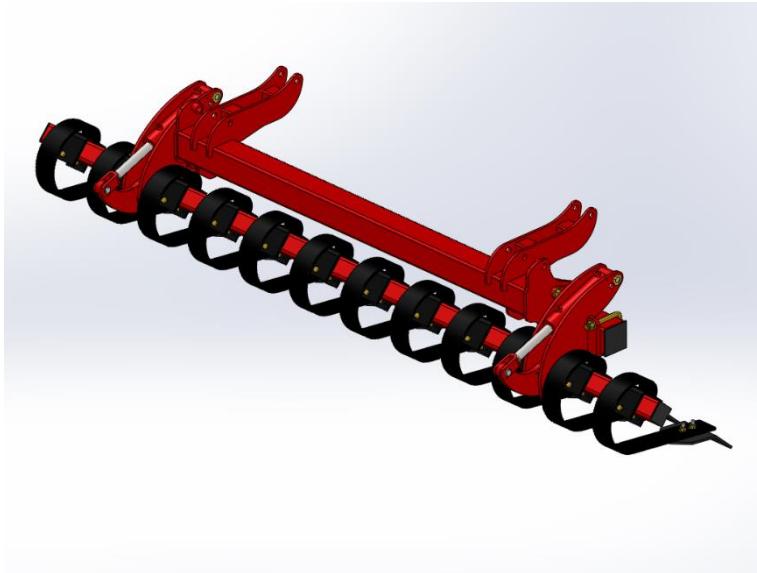

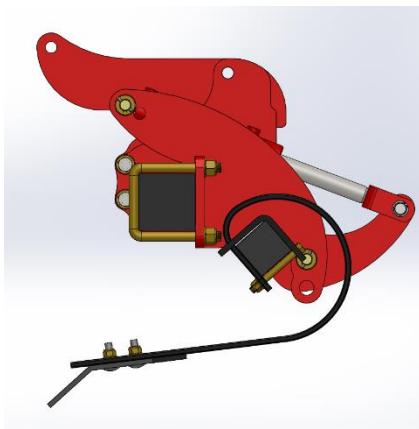

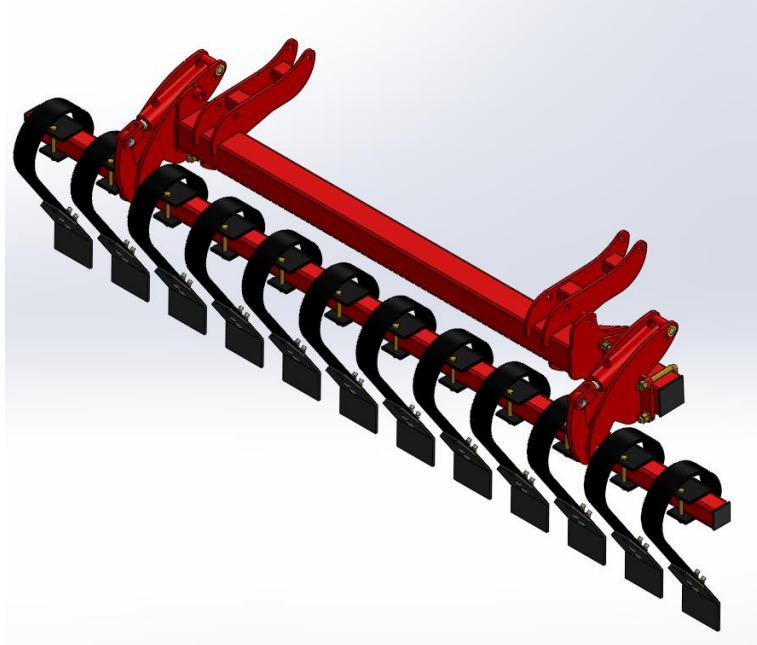

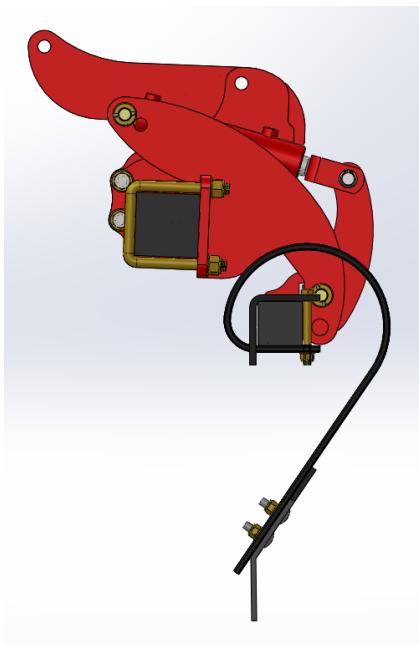

The piston rods are to be lubricated with grease, for long term storage.

Repairs

All repairs are to be performed with original HE-VA spare parts.

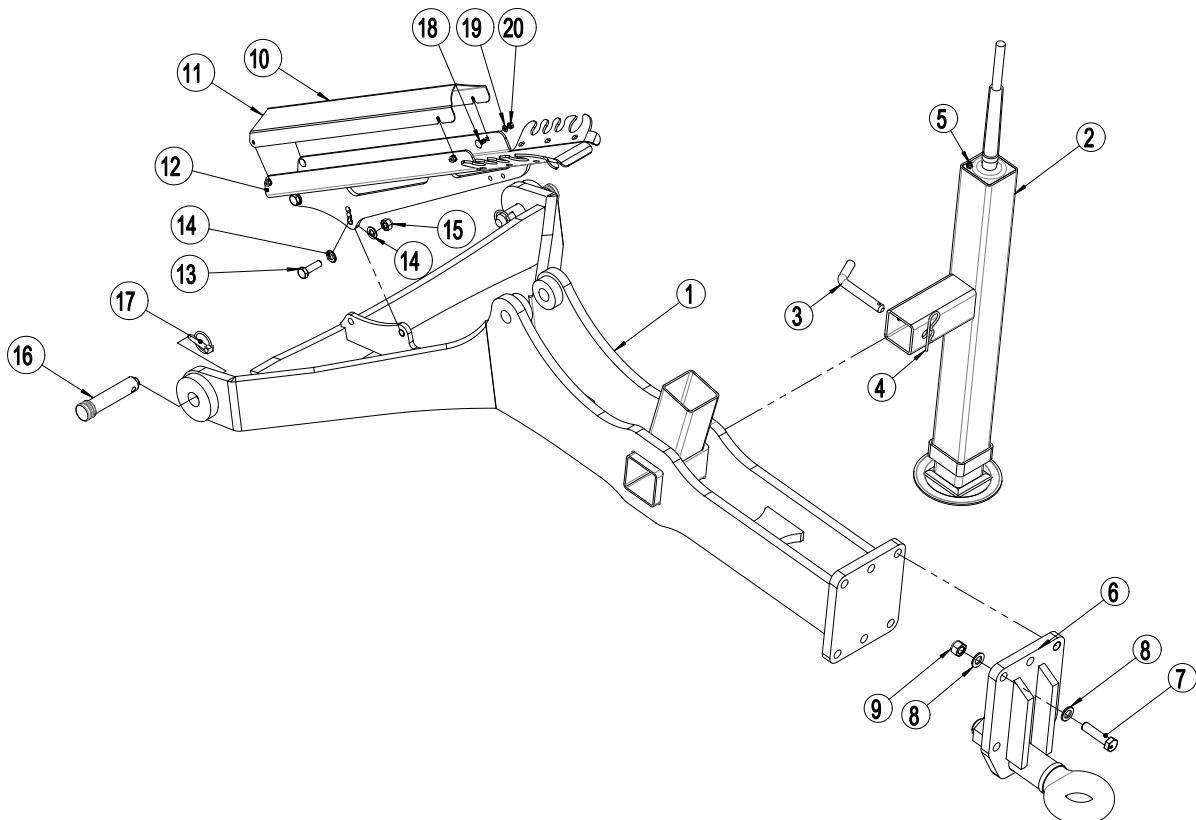

Spring-Board

The Spring-Board requires 1 double-acting hydraulic outlet on the tractor. The tine angle and thereby the aggressiveness of the tines is hydraulically controlled from the driver's cab and the depth control is done manually. The Spring-Board tine bar is adjustable in height and thereby the working angle of the tines against the ground is being changed. The tines work independently, but may be connected by means of a transverse locking system (extra equipment) if a greater levelling effect is required. The change-over is done very easily and quickly without any tools.

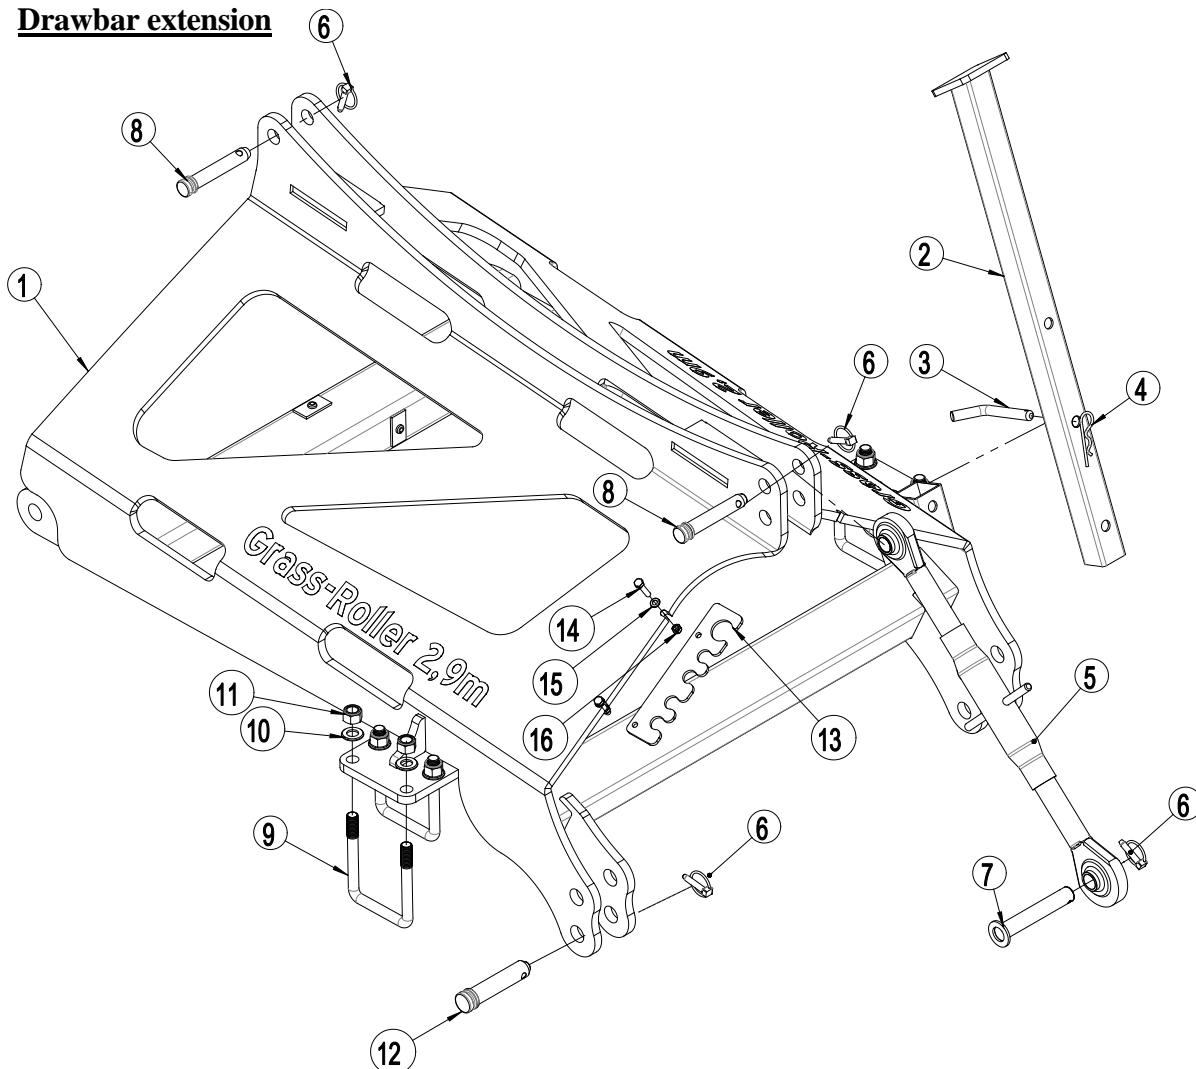

Spare parts list
